

10 and 11 November 2010

Odour Study Day

This event, organised by Silsoe Odours and ADAS, is aimed at increasing awareness about the objective measurements of odours, and how measurement and modelling techniques can be used to address odour nuisance and planning problems. The topic areas should be of relevance to a wide range of specialists including operators of odorous processes, odour abatement plant suppliers and installers, planning and environmental consultants, wastewater treatment specialists and regulators.

Participants will have the opportunity to visit the Silsoe Odours UKAS accredited Odour Laboratory and to see, and experience, how odour concentration analysis is undertaken to the BSEN13725 European Standard. All delegates will have the opportunity to have their olfactory senses assessed and will be issued with a CPD certificate.

Topics included are

Complaints and incident reporting

Sampling, Objective and subjective odour measurement

Odour dispersion modelling and impacts

Tackling the Case Study problems

Odour Laboratory visits and Testing in the Odour Lab

Odour Abatement Equipment

IPPC Odour Guidance

**Building 42
Wrest Park
